

Meeting 1 Notes

Meeting Date: 31 July 2026

Meeting Type: Customer Requirement Gathering

Objective: Understand customer expectations, portfolio tracking needs, and MVP priorities for the portfolio management application.

1. Questions Discussed with Customer

Area	Questions Discussed
Portfolio Coverage	What types of assets should the portfolio track?
User Management	Is the application intended for a single user initially, or should it support multiple users in the future?
Holding Details	What information is important for each holding? (Number of shares, current value, purchase price, purchase date, gain/loss, etc.)
Investment Context	Should users be able to add notes/tags explaining why they bought an asset, or should the application focus only on numerical data?
Performance Tracking	How should portfolio performance be visualized? (Total value, historical charts, asset-wise breakdown, sector-wise breakdown, etc.)
Profit/Loss Tracking	Should the application show gains/losses since purchase or only current portfolio value?
Historical Data	How far back should portfolio history be maintained? Should users import previous investment history?
Transactions	Should buying/selling be recorded as transactions with date and price, or should users manually update quantities?
Cash Events	Should dividends and other cash-related events be tracked?
Alerts	Would users require notifications for price changes or portfolio concentration risks?
AI Features	Would users like to ask portfolio-related questions in natural language (e.g., "What is my best-performing stock this month?")?
AI Summaries	Would AI-generated portfolio summaries/weekly reports be useful?
Price Updates	How frequently should market prices refresh? (Real-time, hourly, daily)
Data Presentation	Preference for dashboard cards, tables, charts, or graphical representations?

2. Customer Vision

Requirement	Description	Priority
Global Portfolio Management Platform	Customer wants to build a world-class portfolio management solution capable of scaling to millions of users.	Long-term Vision
Simple Personal Portfolio Tracking	Initial focus should be a single-user experience where users can quickly check portfolio value, profits/losses, and transactions without mandatory login.	High
Easy Daily Tracking	User should be able to view portfolio status regularly and understand changes in value over time.	High

3. Confirmed Functional Requirements

No	Requirement	Description	Priority
1	Total Portfolio Profit/Loss	Display total profit/loss values prominently for the user's portfolio.	High
2	Current Holdings View	Users should be able to view current investments along with their value and profitability.	High
3	Transaction Tracking	Maintain records of buy/sell transactions including relevant details such as date and price.	High
4	Home Currency Support	Portfolio values should be displayed in the user's preferred/home currency.	High
5	Performance Visualization	Provide graphical representation such as line charts to show portfolio growth/performance over time.	High
6	Filtering and Analytics	Allow filtering and analysis based on security type, geography, and other portfolio dimensions.	High
7	Historical Tracking	Users should be able to analyze portfolio performance over a selected time period using historical data filters.	High
8	User Interface Design	UI should have bold, rich, modern graphics with emphasis on portfolio value and profit/loss visibility. Preferred theme includes vibrant colors such as pink combined with complementary colors.	High

4. Medium Priority Requirements

Requirement	Description	Priority
Dividend Tracking	Support tracking of dividends and distributed dividend payments.	Medium
Mutual Fund Support	Extend portfolio tracking beyond stocks to include mutual funds.	Medium

5. Low Priority / Future Scope Requirements

Requirement	Description	Priority
Import/Export Transactions	Allow users to import existing transactions or export portfolio data.	Low (Future Scope)
Portfolio Chatbot	Allow users to ask questions about their portfolio using conversational AI. Example: "What is my best performer this month?"	Low (Future Scope)
Predictive Modelling	Introduce AI/ML-based prediction capabilities for portfolio insights and forecasting.	Low (Future Scope)

6. MVP Focus Identified from Meeting

Based on the discussion, the MVP should primarily focus on:

MVP Feature	Description
Portfolio Dashboard	A visually rich dashboard showing current holdings, portfolio value, and profit/loss.
Transaction Management	Ability to record and view buy/sell transactions.
Performance Analytics	Charts showing portfolio performance over time.
Historical View	Ability to filter and analyze portfolio history.
Currency Handling	Display portfolio values in user's preferred currency.
Modern UI	Bold, attractive interface focused on easy daily portfolio monitoring.

7. Future Enhancements

Feature	Possible Future Enhancement
AI Assistant	Conversational portfolio queries and recommendations
Predictive Analytics	Forecasting future portfolio trends
Multi-user Support	Expand from single-user MVP to support multiple users
Advanced Asset Coverage	Add ETFs, crypto, bonds, mutual funds
Data Import	Import transactions from external sources

Summary

The customer's immediate goal is to build a simple but visually powerful personal portfolio tracker focused on helping users understand their investments, current value, and profitability at a glance. Advanced capabilities such as AI, predictions, and large-scale multi-user support are considered future enhancements.

I would suggest keeping Meeting 1 and Meeting 2 as separate documents/sections and then adding a final "Consolidated Requirements & MVP Scope" document after both meetings. This format will look professional for a customer-facing requirement document.
